

Brain

<u>Age</u>	<u>Brain Weight</u> <u>Male</u> in (grams)	<u>Brain Weight</u> <u>Female</u> (grams)
Newborn	380	360
1yr	970	940
2yr	1120	1040
3yr	1270	1090
10-12 yr	1440	1260
19-21 yr	1450	1310
56-60 yr	1370	1250

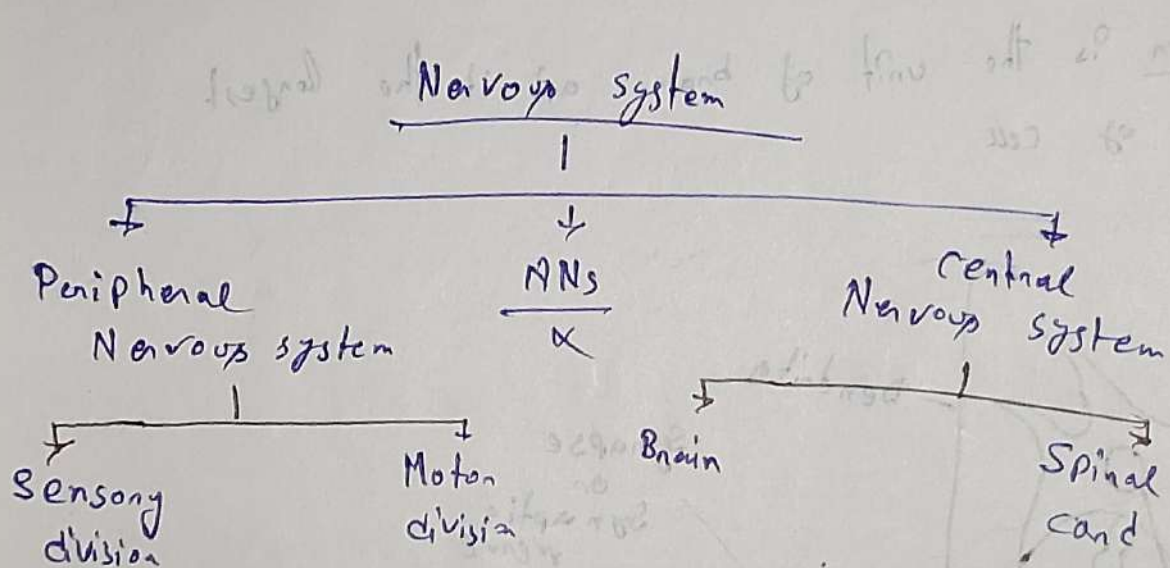

* Neuron is the unit of brain and it is the largest unit of cell.

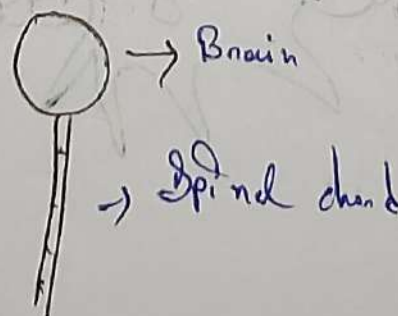

Neuron

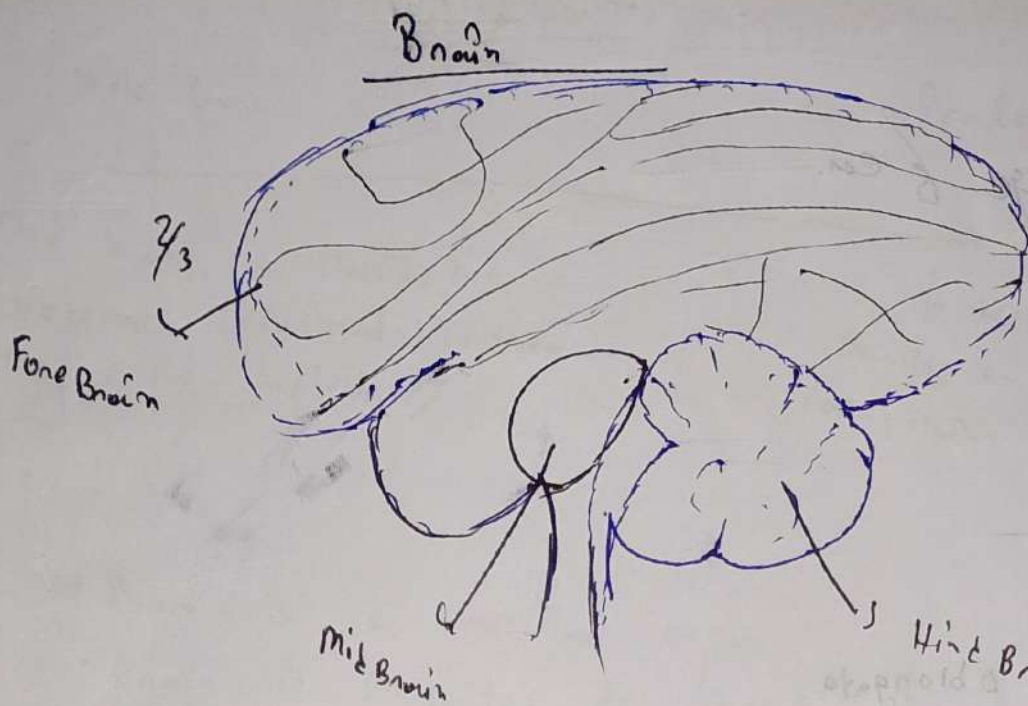

- Star like structure in Neuron is known as Astrocyte
- cell body of Neuron is known as Soma
- Brain is a part of Nervous system

Central Nervous system

Forebrain

- cerebrum - $\frac{2}{3}$
- Thalamus
- Hypothalamus

Thalamus
~~Cerebrum~~

controls

- i) Skin
- ii) Nose
- iii) Tongue

cerebrum

- its most intelligent
- Iq. controls.

Hypothalamus

- It controls emotion
- also known as ~~thermometer~~ ^{thermometer} of body
- Love, Hate, hunger, sleep, etc

Midbrain

- controls eye & ear.

Hind brain

- Pons
- medulla oblongata
- cerebellum

Pons

- Breathing
- message pass
- facial expression

medulla oblongata

- Heart beat
- Breathing rate
- BP
- Swallowing
- vomiting, coughing, sneezing, yawning.

Cerebellum

- Body balance
- smooth movement
- muscle memory

Multitasking

Male Brain

A man brain is not good at multitasking, the way a female brain is

Female Brain

While a woman can do multitasking.

Problem Solving

Male Brain

Female Brain

Male brain, can classify the problems compartmentalize them and solve individually

A female brain cannot classify or process a particular problem

- Brain is a muscular organ
- Brain is protected by skull
- Skull have 8 Bones
- Brain is divided into 5 lobes generally 4 in exams

- Frontal lobe - Maths / IQ
 - Parietal Lobe - [Time, Reasoning]
 - Occipital lobe - [Distance & Direction]
 - Temporal lobe - [Dreams]
 - Hippocampus. {Generally not in exams}
- ↳ Handle of brain

It is divided in 2 Hemispheres

Left Hemisphere

Right Hemisphere

- Cross Wiring if you use left side body then Right Brain will work and vice-versa.
