

Digestive System

- Digestive system
is digestion

digestion
↳ mouth (start's from mouth)

- It is a catabolic process

- When a large molecules breaks in to smaller molecules
the process is called catabolic process.

Salivary glands

- 3 pair salivary glands is present

i) Parotid Salivary gland

ii) Sub-lingual Salivary gland

iii) Sub-mandibular Salivary gland

main food constituent

C- Carbohydrate

P- Protein

L- Lipids

Who digest first - Carbohydrate
what

which is digest from mouth - Carbohydrate

Teeth

- Study of teeth is called Odontology
- Doctor → Dentist
- Human teeth ^{types} → 4

I - Incisors

c - canine

P - Premolar

m - molar

I → 8

c → 4

P → 8

M → 12

Total = 32 Socket

Dental Formulae

I - 8/4 → 2 (Incisors)

c - 4/4 → 1 (canines)

P - 8/4 → 2 (Premolars)

M - 12/4 → 3 (molars)

Adult → 2123

children → 2102

↳ premolar is absent

Wisdom teeth (अकाल दाँद)

→ 18-25 yrs में निकलते हैं

Milk teeth

→ 20 milk teeth is present

Tongue

• Ginger / Garlic / Onion

- Bitter

- Sour

- Sweet

- Salty

Amylase Enzyme

ptylin

Carbohydrate (75-80%)

It is found in mouth Amylase enzyme which digests 80% of Carbohydrate in the mouth.

Carbohydrate + Protein + Lipid → BOLUS
पचा + बिना पचा

Esophagus

- Food pipe
- No Enzyme

Work

Peristaltic movement

Stomach

- J-Shape
- Mucus Layer

↳ Basic

Acid + Base $\rightarrow$ salt + water

- Gastric Gland
- Gastric Juice (HCl)

Appendix

Pepsinogen

Pro-Renin

Inactive $\xrightarrow{\text{HCl}}$ Active

Pepsinogen $\xrightarrow{\text{HCl}}$ pepsin $\xrightarrow{\text{HCl}}$ peptides

Pro-Renin $\xrightarrow{\text{HCl}}$ Renin $\xrightarrow{\text{HCl}}$ Para casein
- (अम्लीय में अवस्था)

Para casein $\xrightarrow{\text{Pepsin}}$ peptides

घोट $\leftarrow$ Carbs + Protein + Lipid $\rightarrow$ chyme

42 $\searrow$ 82 $\swarrow$

बिना घोट

* Small intestine:

Length $\approx$ 6.5-7.5 m

Dia $\approx$ 1 inch

This small intestine has 3 parts.

D $\rightarrow$ Duodenum

J $\rightarrow$ Jejunum

I $\rightarrow$ Ileum

Liver

Liver

$\hookrightarrow$ produce Bile Juice.

$\hookrightarrow$ stored in Gallbladder

Pancreas

$\hookrightarrow$ Pancreatic Juice

$\hookrightarrow$ (1-2.5 Litre)

Amylase

Carbo

Glucose

Trypsin

Peptides

Amino Acid

Lipase

Lipids

Fatty Acid

↳ Dedunum (everything digested here) ^{July}

Jejunum + Ileum

Transfer → Large Intestine

Large Intestine

Length → 1-1.5 m

Dia → 2-3 in

Three parts.

C → Cecum

C → Colon

R = Rectum

Cecum.

- E. coli Bacteria is present here → fecal (मल)
- also help to make vit K, B₁₂

Colon

water absorb.

Rectum

Fecal (मल) → Anus (गुदा)

↳ Excrete (उत्सर्जित)

Small intestine (enzyme)

अगर किसी भी शब्द के अंत में,

ose $\rightarrow$ carbohydrate

ase $\rightarrow$ Enzyme

Sucrose Sucrase $\rightarrow$ Glucose + Fructose

Lactose Lactase $\rightarrow$ Glucose + Galactose

Maltose Maltase $\rightarrow$ Glucose + Glucose

आहार नाल (Alimentary canal / Digestive Tract) - gm

गौजन ~~नाल~~ (Food pipe / Esophagus)

स्कार $\rightarrow$

Fart $\rightarrow$ CH_4 , N_2 , Sulphur

This makes (H_2S) .
